

String -

1. Collⁿ of characters inside ""
2. Strings are immutable
3. 3 ways to create a String
 1. using literal
 2. using new keyword
 3. from char array

using literal

```
String name = "raj";
```

hard coded
or
literal

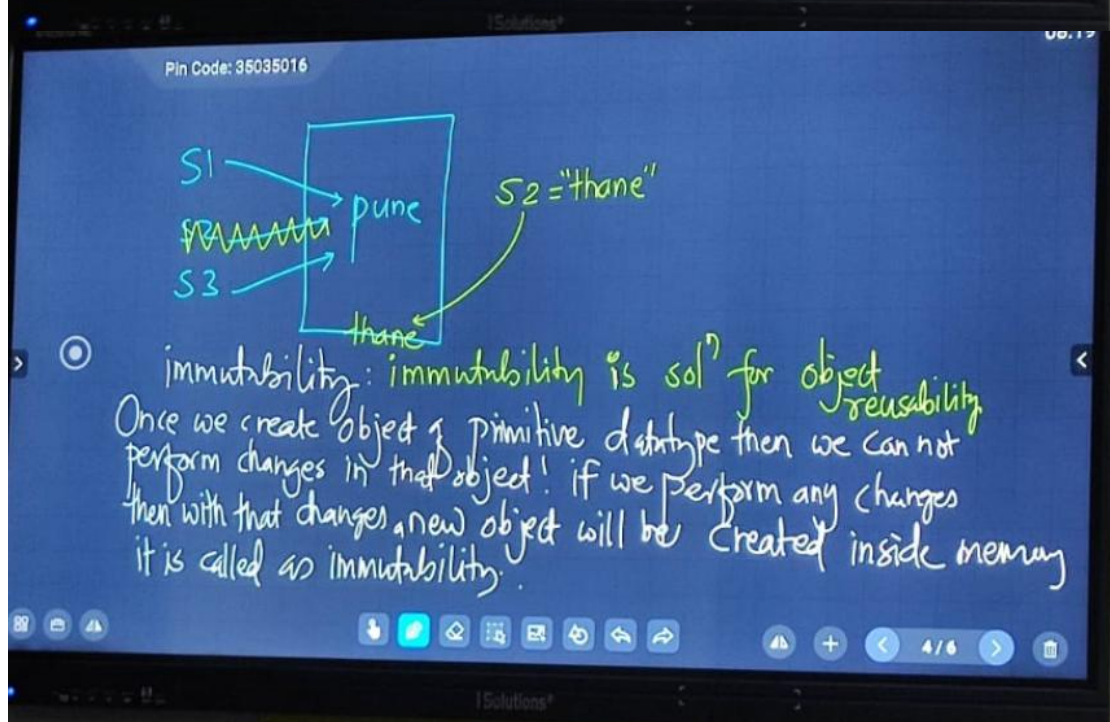

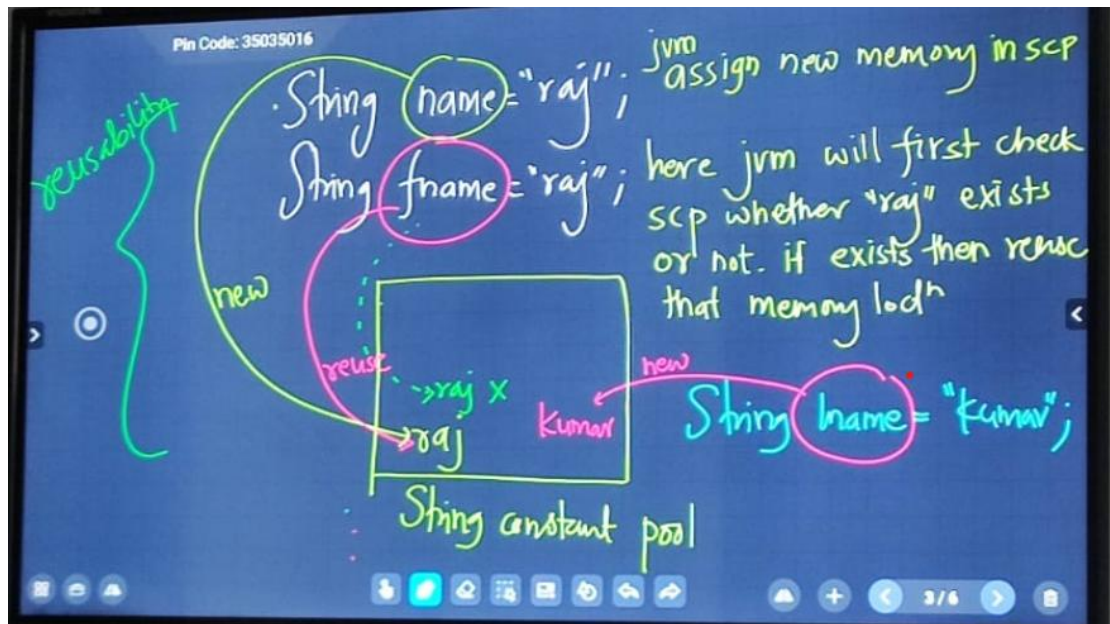

new keyword

```
String name = new String("raj");
```

from char array

```
char[] data = {'j', 'a', 'v', 'a'};
```

```
String s = new String(data);
```

we can perform oprⁿ on String but then
can not modify og string

String name = "raj";

length, substring, concat, contains
to new

if we want create mutable string then
we have to use 2 classes

StringBuffer

1. Thread Safe
2. Syn.
3. Java 1.0
4. slow

StringBuilder

1. X
2. Asyn.
3. java 1.5
4. faster

multi-threading
support
