

why methods?

- to get over duplicate code
- to make logic dynamic

important

- method will execute only when we call it!

class Student.

{

String name;

Student (String sname)

{

this.name = sname;

}

psvm (String arg[])

{

Student s1 = new Student ("saj");
Student s2 = new Student ("rani");

}

saj ← s1.name
rani ← s2.name

}
