

nums = [3, 0, 1]

n = total numbers = 3

range = [0, 3]

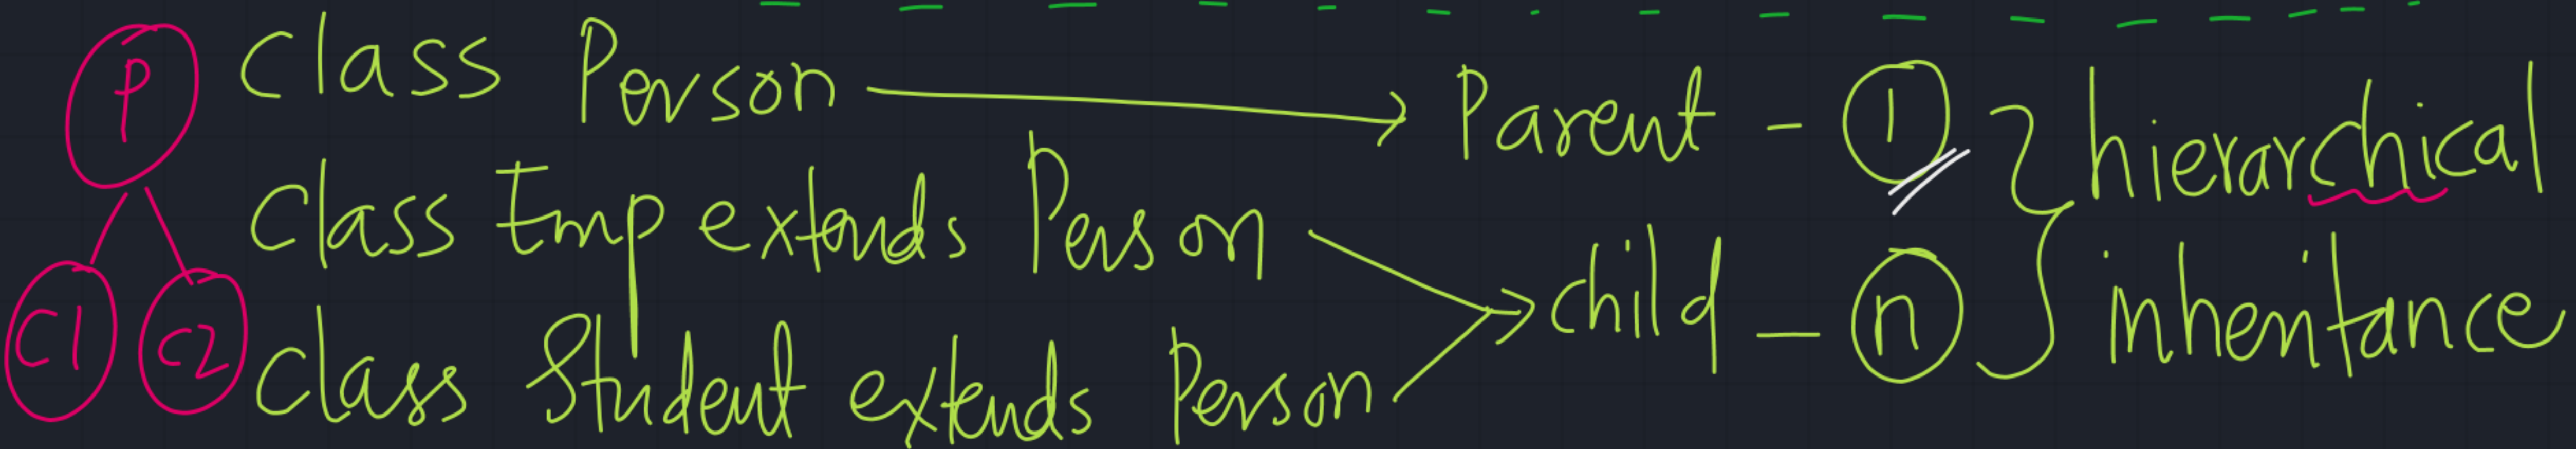

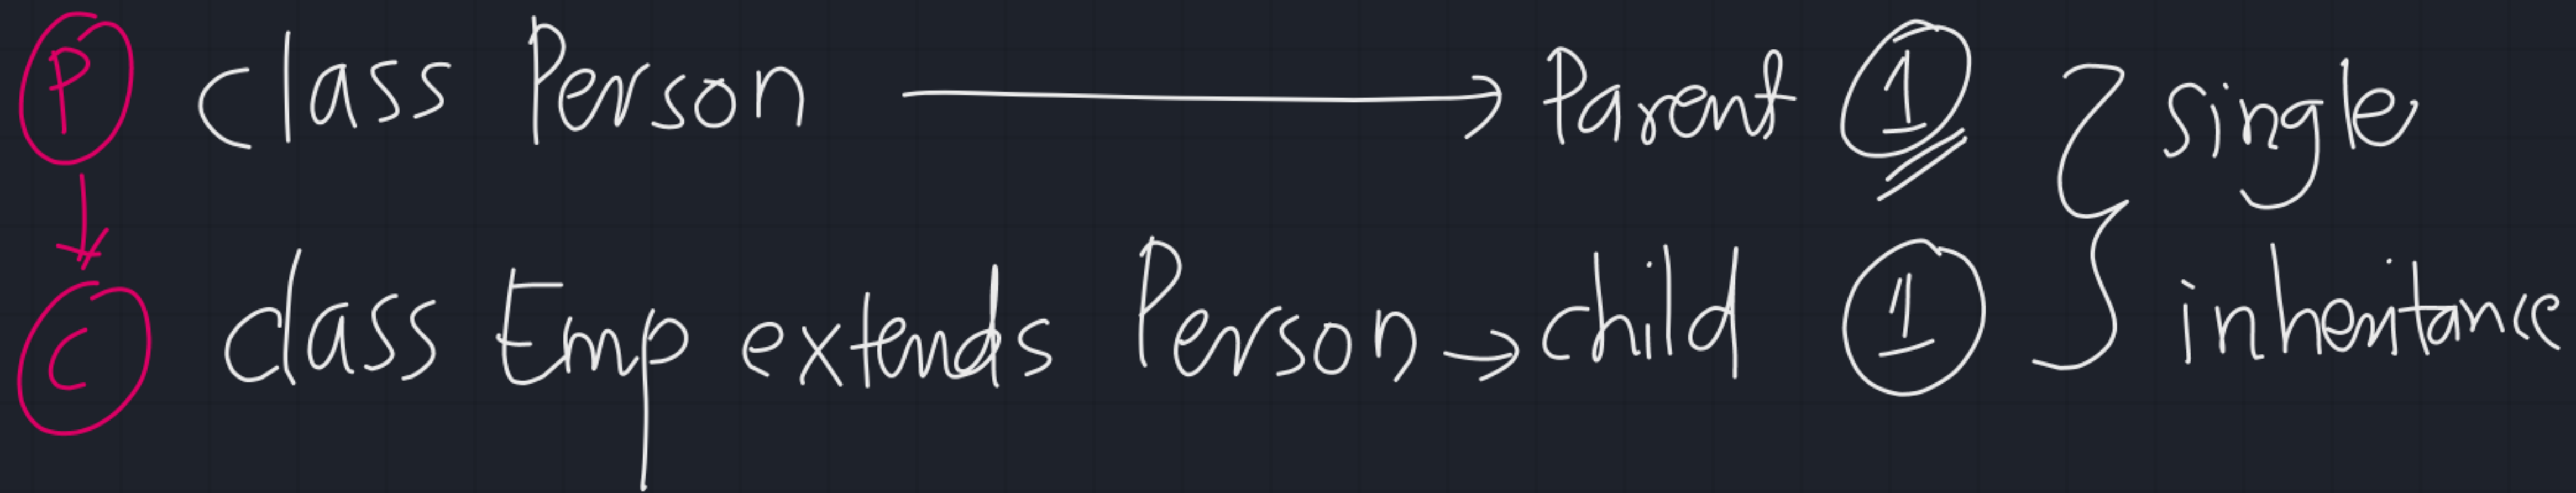

nums = [0, ~~1~~]

n = 2

range = 0, 2

0, 1, 2

0, 1, 2, 3

class Person
class Human
class Emp extends Person, Human

→ Parent ②

} multiple inheritance
not possible

reasons
why
multiple
inheritance
not supported

- we can extend at most one class in java
- if both parent have method with same name then it will create ambiguity, which method to call \

multilevel inheritance

```
class Grandfather ————— level 1
class Father extends Grandfather —> level 2
class Son extends Father —> level 3
```
